Abstract

In 2019, the world has been attacked by a coronavirus (COVID-19), many educational institutions have changed significantly. To prevent this virus from spreading further among students, Malaysian education will conduct classes online. However, people are concerned about the impact of online learning on Bachelor of Art In Accounting and Finance (BAAF) students. In addition, the study investigates the impact of online learning on BAAF students during the pandemic covid-19. Specifically, this study aims to investigate relationship between online learning and students' performance, benefits of online learning toward BAAF students' performance and disadvantages of online learning toward BAAF students' performance. This study has provided a literature review for all objectives in order to achieve it in this research. This study employs a quantitative method to answer the research question and objective. The sample consists 162 respondent that answer by BAAF student in the Google form. To investigate the impact of online learning on BAAF students, the data was analysed using SPSS version 27, which included descriptive statistics and regression analysis. According to the descriptive statistics and regression analysis, the BAAF students prefer online learning over face-to-face learning. The relation between online learning and students' performance appears to be positive.
