Abstract

E-learning using google sites is a learning platform that uses information and communication technology (ICT). This study aims to identify the frequency of students using e-learning in a week and the students' acceptance of knowledge in the e-learning process for the Introduction to Network course at Seberang Perai Polytechnic.. The respondents of this study consist of 31 students who are semester 2 students, Diploma in Information Technology (Digital Technology), Polytechnic Seberang Perai. This research instrument uses a questionnaire that is divided into 3 parts, namely Part A is to obtain the demographic data of the respondents while part B in this study is to study the frequency of students using e-learning in a week and part C is to measure the level of knowledge, skills and needs of students in the use of e-learning. The questions of the questionnaire instrument use a 5 point likert scale. Overall, the results show that the frequency of respondents using e-learning in a week is as much as 6-10 times. Findings for the level of knowledge, skills and needs of students in the use of e-learning are high because it was found that the mean value is above 3.68%. Overall, the findings show that students accept the use of e-NET as an e-learning medium for learning and teaching for the Introduction to Network course at the polytechnic.
